WWW (Lab): http://dsl.skku.edu

Education

- **Sungkyunkwan University**, Seoul, Korea **March 2020 - Present**

  M. S., Applied Artificial Intelligence

  Adviser: Professor Eunil Park

- **Sungkyunkwan University**, Seoul, Korea **March 2016 - August 2020**

  B. A., in Psychology

  B. S., in Engineering, Samsung Convergence Software Course (SCSC)

Research Interests

- Human-Computer Interaction
- Cognitive Science
- Computational Social Science
- Data Science, and Data Analytics
- Application of Artificial Intelligence

Publications

[1] Kim, J., Ji, H., **Oh, S.**, Hwang, S., Park, E.*, & del Pobil, A. P. (2021).
A deep hybrid learning model for customer repurchase behavior. Journal of Retailing and Consumer Services (SSCI, JCR 2019 IF=4.219, Q2 in *Business*).

[2] Kim, J., Jang, Y., Bae, K., **Oh, S.**, Jeong, N. J., Park, E.*, & del Pobil, A. P. (2021).
Between comments and repeat visit: capturing repeat visitors with a hybrid approach. Data Technologies and Applications.

[3] **Oh, S.**, Kim, J., Ji, H., Park, E.*, Han, J., Ko, M., & Lee, M. (2020).
Cross-cultural Comparison of Interactive Streaming Services: Evidence from *Twitch*, *Telematics and Informatics*, ISSN: 0736-5853 (SSCI, JCR 2019 IF=4.139, Q1 in *Information Science & Library Science*).

[4] Kim, J., Shin, S., Bae, K., **Oh, S.**, Park, E.*, & del Pobil, A. P. (2020).
Can AI be a content creator? Effects of content creators and information delivery methods on the psychology of content consumers, *Telematics and Informatics*, ISSN: 0736-5853 (SSCI, JCR 2019 IF=4.139, Q1 in *Information Science & Library Science*).

Work in Progress

[1] **Oh, S.**, Ji, H., Kim, J., Park, E.* (Status: Submitted).
Deep learning model based on expectation confirmation theory to predict customer satisfaction in hospitality service

- This study employs deep learning frameworks in combination with the constructs from the expectaion-confirmation theory to provide better understanding of customer behavior in hospitality service.

[2] **Oh, S.**, Choi, E., Park, E.*, & Kim, K. (Status: Submitted).
Are you aware of what you are watching? Role of machine heuristics in online content recommendations.

- This study aims to identify machine heuristic bias within video recommendation system. Specifically, it tests the cognitive heuristics that appraises the machine to be more accurate and trustworthy than a human. An online experiment was conducted to compare the attitude toward recommendations with inappropriate videos between machine and human recommendation system.

[3] **Oh, S.**, Kim, J., Lee, S., Park, E.* (Status: Submitted).
Jujeop: Korean Puns for K-pop stars on Social Media

- Jujeop is a type of pun and a unique way for fans to express their love for the K-pop stars they follow in Korea. This study analyzed the Jujeop comments in video streaming platform and constructed the annotation guideline and corpus of each type of Jujeop for the further study. Then, evaluated the corpus by several natural language processing tasks (i.e., classification, k-means clustering).

[4] Jeong, D., **Oh, S.***, Park, E.* (Status: Submitted).
DemoHash: Hashtag Recommendation based on user demographic information

- This paper proposes the demographic hashtag recommendation (DemoHash) model to utilize the users' demographic information extracted from their selfie images, in addition to textual and visual information in social media service.

[5] Lee, S., Kim, M., **Oh, S.***, Park, E.*, & del Pobil, A. P. (Status: Writing paper).
Race bias of deep learning models in predicting criminals: Role of facial elements

- This study highlights the importance of unbiased dataset of racial representation with machine learning, especially for law enforcement. After training several deep learning models with racial biased dataset, we evaluated the models with racial transformed dataset.

Academic Services

- Teaching Assistant, Undergraduate Course, AAI3020: Capstone Design Project for Artificial Intelligence, **Fall semester, 2020**
- Research Intern, DxLab, Sungkyunkwan University, **Summer 2019 - Summer 2020**

Research Projects

[1] Researcher, "Towards Super Sapiens: Superintelligence for Future Human Innovations" (Korean: ICT명품인재양성(성균관대학교); Sungkyunkwan University, **Sep 2020 – Dec. 2020**

[2] Assistant Researcher, "Exploring user experience of augmented reality and virtual reality products" (Korean: 증강현실, 가상현실 기술을 통한 상호작용 활성화와 관련 기술 및 제품수용 증대 방안; Sungkyunkwan University, **June 2020 – Aug. 2020**

[3] Assistant Researcher, "Developing a Deep Learning Model for Predicting Service Reuse" (Korean: 딥러닝 기반 서비스 재이용 예측 모델 개발; Sungkyunkwan University, **July 2019 – Aug. 2019**

Experiences

[1] Machine learning Team Leader, DxLab, Sungkyunkwan University, **Feb. 2021 - Present**

[2] Introduction to IoT, Kyunghee University, South Korea, **16.07 2019 - 18.07.2019**

- Achieved student level credential for completing Introduction to IoT course administered by the undersigned instructor.

[3] Language Exchange Student, Okayama University, Japan, **Feb. 2019 - March 2019**

- Visiting student at Okayama University for language and culture exchange supported by scholarship.

[4] Internship program, Silikal GmbH, Frankfurt, Germany & Seoul, Republic of Korea, **Feb. 2018 - July 2018**

- Conducted logistics, sales, warehouse control, process survey and etc.

[5] Financial Team Leader of Hanon Club, Sungkyunkwan University, **Feb. 2017 - July 2017**

- Host a culture exchange festival

Technical Skills

Programming languages

- Python, SPSS (proficient)
- HTML (moderate)
- C, Java (experienced)

Deep learning frameworks

- Tensorflow, Keras, Pytorch
